                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LOPEZ-OTIN C., VINUELA E.;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0 Claim 3: Page 8-9: 13pp; Japanese. The sequence (Q55708) shows a recombinant plasmid which encodes myoinositol dehydrogenase. The plasmid can be transformed into a suitable host thus producing myoinositol dehydrogenase quickly a suitable host thus producing myoinositol dehydrogenase quickly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    genes (see also 743376-8) isolated from a thiol-selected interlaukin 2-indused human T-cell blaat cDNA library. 6 Genes (CRL, 2, 3, 5, 6, 8) are novel. CR3 shows homology to 6-coupled 7 transmenbrane -panning receptors of the prostaglandin family and probably plays a regulatory role in cellular proliferation and/or inflammation. It provides a novel receptor that allows the manipulation of cellular functions controlled by blochemical pathways signalled by the receptor and may be used to identify lignals useful for medulating cellular proliferation and inflammation. Recombinant CR3 polypeptides can be produced in bost sequence 338 Ak.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            336 ltrhrvt

Co This protein sequence comprises appartate aminotransferase KC/AA

Co This protein sequence comprises appartate aminotransferase KC/AA

Co Graws optimally at 70 deg C and pH 7.0 in low salt medium. The

Co claimed thermostable transaminases and aminotransferases (W4248-57)

Co Claimed thermostable transaminases and aminotransferases (W4248-57)

Co can be produced from native or recombinant host cells for use with

Co L- and/or D-amino acids for production of optically pure chiral

Co compounds used in the pharmaceutical, agricultural and other

Co industries. A method is claimed for transferring an amino dried to

Compounds used in the pharmaceutical, agricultural and other

Co industries and method is claimed for transferring an amino dried to

Compounds used in the pharmaceutical, agricultural and other

Co industries and anino acid to an alpha-beo acid using a claimed enzyme

Co industries an indicator of heart damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Đ

N-SSD: GOODS.

Production of very long chain fatty acid(s) in plant(s) - to produce Production of very long chain fatty acid(s) in plant(s) - to produce drought and stress resistant transgenic plant(s) - to produce produce produce the produce produce to purification of jojobs and produce produce accurate acquence is application so 33/1024. Jojobs fatty acyl reduces acquence is hown. A membrane prepr. having wax synthase activity is isolated, the wax synthase activity is solabilised, and the sax synthase activity is solabilised, and the wax synthase activity in solabilised, and the wax synthase activity is solabil

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA construct expressing jojoha wax synthase and transformed Brasica cells - useful for producing wax ester(s) for use in pharmaceuticals and commetties, etc.

Dhachosure; Column 43-46; 30pp; English.

A jojoha fattyracyl-reductase ONN was used in the construction of vectors for plant transformation, Transgenic Plants, e.g. cliseed wax-synthase are used for wax ester prodn.

Sequence 433 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            511 laslrps 517

the anaplerotic function of the cell-it indirectly increases biosynthetic

for

pr Novel human cytomegalovirus helicase . used for screening for RCMV PT antivirals and in diapposis of IRMV related diseases 98 Example 1; Pages 20-21; Pagp; English.

CC The present sequence represents human cytomegalovirus (RCMV) UL70 ct ansiation product. The UL70 open reading frame spans nucleotides co 19505-6. The amplified product was disperted with Rel and XmaI and CC cloned Ainto Net/Lord disperted 1987786 vector DNA to yield the plasmid product were determined. Recombination into BacPAK of viral DNA, plaquel CC product were determined. Recombination into BacPAK of viral DNA, plaquel CC purification and generation of viral stocks were by standard protocols. The protect was used with a new ENGW helicase in a screening stock of compounds which inhibit BMCV helicase (prefetably with an IC50 CR result greater Hum 200Ms), and as a diagnostic tool for diseases so sequence 940 AM. Intection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc w07521-W07524, and w07527 represent T-cell modulating peptides that can ce be used in the method of the invention. These sequences are based on a cc portion of the generic peptide corresponding to residues 70-91 of the callphal-domain of the major histocompatability complex (MEO) class I can tigen (see W07521). The method is for affecting the course of an cautoimmune disease involving T-cell mediated destruction of tissue in commania. These peptides are used especially to treat insulin-dependent cd diabetes mellitus, preferably being administered during the pre-clinical commania. These peptides are used especially to treat that can be treated correspondent of the course of the disease. Only the course of the disease. Only disease, that can be treated correspondent of the course of the disease. The course of the disease in the course of the disease of the course of the course of the disease. The course of the c Any unbound peptides are removed and the complexed peptides are entitled by re-contacting them with the SH3 domain and the nondidates which hind to the SH3 domain are detected. The located SH3 binding peptides may be used in the diagonals, prevention and treatment of conditions or discesses resulting from collular processes mediated by an SH3-based interaction such discesses include Payer's discesse. Other conditions treatment with these peptides hackulde restoness in Finematoid arthritis, gout and other implicated, etc. Alocular creatments of the conditions of the problems in which an SH3 of neutrophil oxidase pf7 and p67 complex is sequence 14 Ah.

In wish are containing less antigen or microorganism that expresses proceed to treat or prevent catanate by reducing the level of prantibodies directed sgafant less protein

Example 4; Page 29; Jäpp: English.

Comissequence is an internal fragment of human beta-92-crystallin. Comissequence is an internal fragment of human beta-92-crystallin. Comissequence is an internal fragment of human beta-92-crystallin and crespective olispoppides. As a result, only spetide fragment amino combeta-92-crystallin. This suggests that the binding site (spltope) of the 92-crystallin. This suggests that the binding site (spltope) of the 92-crystallin or the antional was a result in the second process of the second process of an antigens of sequence of anino acids numbers 162-165 of beta-92-crystallin or a nicroorganism hat can express a less antigens are used on a pharmaceutical composition. The composition can be used to prepare can inhibitor of an incress of anti-lens procein antisodies. The composition can be used to prepare composition that the binding of the pharmaceutical composition and the composition of the

COMMENT

chains and two catalytic chains. Activation by cAMP produces two active catalytic monomers and a regulatory dimer that binds four CAMP molecules.

US-08-951-733-20.zpr

COMMENT COMMENT oby molecules.

Four types of regulatory chains are found: I alpha, I beta, II alpha, and II beta. Their expression varies among tissues and is in some cases constitutive and in others inducible.

Type II regulatory chains are phosphorylated by the activated catalytic chain. The physiological significance of phosphorylations by other Kinsses as molecularities that the phosphorylation by an accomplished the phosphorylation of the pho

CLASSIFICATION esuperfamily cAMP-dependent protein kinase regulatory chain; cAMP receptor protein cyclic nucleotide-binding domain
